RESEARCH INTERESTS	My research builds spectral and information-theoretic foundations for machine learning. As an information theorist by training, I distill complex ideas, unify principles across domains, and translate them into scalable algorithms bridging theory and practice. Recent work includes neural network-based operator learning for scientific simulation [C9], [C15], [C16], score-based generative modeling [C12], and uncertainty quantification and anytime-valid inference [J2], [C10], [C11], [C14].
